

Master of Science in Integrative Medicine Research

- Housed within the largest research institute of any naturopathic medical school
- Diverse faculty with expertise in integrative medicine
- Focus on natural therapies and whole medical systems

Students in the MSiMR program develop a strong foundation in the design and conduct of rigorous studies combined with experience in integrative medicine. Through cross-disciplinary coursework and mentoring, this program trains students to build careers in medical research.

Work with expert investigators in the fields of:

- Nutrition
- Mind-body medicine
- Botanical medicine
- Environmental health
- Health disparities
- Global health

Integrative medicine research requires innovation and creativity. This program is ideal for students who want to meet the challenge of designing research that captures the nuances of individualized medical care.

This unique program prepares graduates to work in research-intensive institutions, public health settings, or go on to pursue advanced medical or graduate degrees.
